

SAGAR S

Agentic AI Engineer | LLM Applications | Multi-Agent AI | RAG | Backend Engineering

Bengaluru, India | +91 73384 98489 | sagarchalatan@gmail.com | [linkedin.com/in/sagarchalat](https://www.linkedin.com/in/sagarchalat) | github.com/sagarchalat | sagarchalatan.netlify.app

PROFESSIONAL SUMMARY

Agentic AI Engineer with 1.8+ years of experience designing and delivering production-ready AI applications in Python, FastAPI, LLMs, and Retrieval-Augmented Generation (RAG). Experienced in building multi-agent AI systems, semantic search platforms, and scalable backend services deployed on Docker, Kubernetes, and Google Cloud Platform (GCP). Strong in AI orchestration, REST API design, vector databases, and enterprise AI architecture, with a track record of turning an original concept into a production system.

TECHNICAL SKILLS

Agentic AI & LLM: Agentic AI, Multi-Agent Systems, LLM Application Development, RAG, Prompt Engineering, Tool Calling, AI Workflow Orchestration, LangChain, HuggingFace, Semantic Search, Embeddings, Model Evaluation

Languages: Python, Java, SQL, Bash

Backend: FastAPI, Flask, REST APIs, AsyncIO, Microservices

Databases & Vector Stores: PostgreSQL, MongoDB, FAISS, ChromaDB

Cloud & DevOps: Docker, Kubernetes, Google Cloud Platform (GCP), Git, GitHub Actions, CI/CD, Linux

Computer Science: Data Structures & Algorithms, OOP, Design Patterns, Distributed Systems, Multithreading

PROFESSIONAL EXPERIENCE

Software Engineer | STL Digital, Bengaluru

Jan 2025 – Present

- Design and build scalable FastAPI microservices that power enterprise AI applications and expose REST APIs for LLM-driven workflows.
- Build production RAG pipelines -- semantic search and vector-based document retrieval -- to ground LLM responses in real enterprise knowledge.
- Design modular backend services that connect AI components and enterprise applications through reusable, well-defined API contracts.
- Write Python automation for deployment validation and recurring engineering tasks, cutting down manual effort across the team.
- Containerize AI services with Docker and deploy them on Kubernetes clusters running on GCP.
- Work in Linux production environments daily -- debugging, monitoring, and keeping AI services healthy.
- Collaborate cross-functionally using Agile practices, Git workflows, peer code review, and CI/CD.
- Proposed an enterprise AI QA Operating System as an internal innovation initiative and led its technical architecture and implementation with the engineering team -- a platform that automates requirement analysis, test planning, execution, and reporting through coordinated AI agents working over a shared knowledge base.

PROJECTS

AI QA Operating System (AQOS) — Enterprise Multi-Agent AI Platform

Python, FastAPI, LangChain, RAG, PostgreSQL, Vector Database, Docker, Kubernetes, GCP

- Conceived and designed an enterprise AI quality-engineering platform as a personal project, then presented the concept internally, where it grew into an implementation initiative with active engineering collaboration.
- Played a lead role in designing and implementing a multi-agent AI architecture that automates requirement analysis, test planning, execution, defect triage, root-cause analysis, and release reporting through coordinated AI agents.
- Built RAG pipelines using vector embeddings and semantic search to give the agents reliable access to enterprise knowledge.
- Developed FastAPI microservices exposing REST APIs for requirement ingestion, orchestration, execution tracking, reporting, and AI workflow integration.
- Designed the backend architecture integrating AI agents with enterprise systems through modular, tool-callable APIs that support autonomous workflows.
- Used PostgreSQL and a vector database for structured application data, embeddings, and semantic document retrieval.
- Containerized services with Docker and supported scalable Kubernetes deployments on GCP.
- Contributed across production backend engineering, cloud deployment, and AI orchestration, working closely with cross-functional engineering teams.

EDUCATION

Bachelor of Engineering, Information Science & Engineering

Sri Siddhartha Institute of Technology, Karnataka, India — 2024

CERTIFICATIONS

- Programming with Python Professional Certificate — OpenEDG
- Machine Learning Statistical Foundations — Wolfram
- Career Essentials in Generative AI — Microsoft
- Java Foundations — JetBrains
